

3 Star

Throughout the season, F1 drivers travel a lot, covering massive distances to get from one race to another. Lewis Hamilton lives in London. After each race Lewis always returns home to rest before his next race. The first race of the season is in Australia (Melbourne). The distance from London to Melbourne is 16,893km. So, to travel to Melbourne and back to London it's 33,786km.

Can you calculate the total distance (km) Lewis will travel around the globe during the F1 season?

Can you convert the total distance in km into miles?

Clue! When you convert km to miles you should end up with a smaller number.

Here's the full list of 2019 races. In brackets is the city / track where the race takes place.

1. Australian Grand Prix (Melbourne)
2. Bahrain Grand Prix (Sakhir)
3. Chinese Grand Prix (Shanghai)
